I have a folder with a file (ex: File1.txt) and a variable \$a with the value C:\Users\user\File1.txt. Is there a way I can print out the contents of \$a with the value C:\Users\user\File1.txt? A: It's possible to include a relative path in the PowerShell prompt so you could do something like this: [Environment]::CurrentDirectory + '\a.txt' That would make the PowerShell interpreter think that a.txt is at the same level as the current directory. You might be able to do it like this: PS a:\> \$a = 'C:\Users\user a1d647c40b

Run the batch file. Does mass transit really increase population growth? This article first appeared in the October, 2007 issue of Legacy magazine. In 2003, Alon Harel, the leader of Israel's Labor Party, was elected prime minister. It was the country's first peacetime coalition government in almost three decades. Harel's long-standing dream had come true—the cabinet consisted of a broad and diverse array of parties representing different religious and ethnic communities. But Harel was disappointed. Although the prime minister of Israel has considerable power, he still had to contend with President George W. Bush's aggressive war in Iraq and the subsequent occupation of the country. This occupation upset Israel's traditional political map. In general, the Arab population and political parties in Israel supported Israel's right to defend itself in Iraq; the Jewish population and political parties were opposed. Harel believed that Israel's future as a democratic, multicultural, and bilingual society was at stake. For Harel, Israel's future was inseparable from its Arab population. The government could not cede control of an entire section of the population to the Palestinians, he argued, nor could it allow them to dictate the policies of the state. To be sure, Israel's Arab citizens could not be compelled to join the military and in most respects could not be forced to follow Israel's laws. But Harel believed that Israel must accept the fact that an authentic Jewish state could not be built on the ashes of an ethnically cleansed Palestine. Today, as Harel comes to the end of his second four-year term as prime minister, the question that weighs heavily on Israel's politics is what kind of country will Israel be after Harel leaves office? The result, according to Harel, is a very different Israel. A general amnesty for illegal immigrants would be one of the prime minister's top priorities. The country would be a multicultural state in which the Arab population would participate in all facets of Israeli society. It is not difficult to discern that many of Israel's current problems would be resolved under such conditions. Before Harel assumed the prime minister's office, Israel did not have any overt conflict with its Arab citizens. Following Israel's 1948 conquest of the West Bank and Gaza Strip, the country occupied that territory in order to create a Jewish state in the historic homeland of the Jewish people
