Keymacro is a program that enables you to record keyboard commands. KEYMACRO provides you with a simple yet intuitive user interface. If you have never used a Macro recorder before, then we recommend that you read the detailed instruction manual before trying to use the program. Keymacro supports Apple and Microsoft keyboards as well as other popular devices. Additionally, it can record commands from both the Windows Task Bar and your system's volume control. Its advanced features include the following:

- **Dynamic Text Recognition:** Keymacro can recognize the text that you are typing. This means that you can record commands when you are typing in documents and other scenarios where you need to record keyboard commands.
- **Ability to Record Your Commands:** Keymacro allows you to record commands for your convenience. You can choose to record one, a few or all of your commands.
- **Keyboard Recording:** Keymacro enables you to record keyboard commands while you are not using the keyboard.
- **Shortcuts:** Keymacro allows you to define different shortcuts for different commands.
- **Ability to Cancel Commands:** If you want to cancel the commands being recorded, then you should do so before you press the OK button. You can only record commands that have been completed.
- **Import/Export:** You can import and export your commands to and from.txt files. This feature is useful if you want to share your commands with other people.
- **Triggers:** Keymacro allows you to define some trigger conditions that will stop recording a command. You can choose to stop the recording when you type a certain sequence of characters, when you press a specific key or when the system's volume or CPU load increases.
- **History:** Keymacro allows you to save your commands to a history list. You can choose to keep
