Autism Spectrum Disorder (ASD) is an autistic disorder with symptoms of social withdrawal and communication difficulties. Due to the effects of ASD on social skills and nutrition, there is a need for a broad investigation of dietary factors. Small Intestinal Bacterial Overgrowth (SIBO) is the abnormal overgrowth of bacteria in the small intestine. It is one of the possible causes of functional gastrointestinal disorders, such as reflux disease and irritable bowel syndrome. SIBO may cause gastrointestinal symptoms and complaints, and its effects can affect food preference, absorption, and nutrition of the patient. Patients with ASD are more likely to have SIBO than healthy individuals. SIBO is not clearly understood in children and adolescents with ASD. On the other hand, previous studies which investigated SIBO in children with ASD, have included a small number of children and did not include children diagnosed with ASD according to strict criteria. The aim of this study was to investigate SIBO in children with ASD. We also examined whether SIBO in children with ASD differs from that of children with ADHD, which has been associated with SIBO in previous studies. SIBO was determined using lactulose hydrogen breath tests (LHBT). Lactulose is a non-digestible carbohydrate that is absorbed by intestinal epithelial cells and is subsequently used as a marker to detect SIBO. All subjects were given lactulose with a marker to detect lactulose, and breath samples were collected at 30 minute intervals up to 120 minutes. Patients in the ADHD group were given 25 mg of methylphenidate before the test to reduce the stimulating effects of the ingested food. SIBO was considered positive if the breath test values were higher than 20 ppm; and negative if the values were below 10 ppm. SIBO was determined in 18 children (10 males, 8 females) with a mean age of 9.9±2.6 years. The SIBO rates were 23.5% in the ADHD group and 37.5% in the ASD group. The difference in the rates of SIBO was not statistically significant. The findings of this study show that SIBO is more prevalent in ASD than in children with ADHD.The BBC has kicked off a new trailer for Sherlock season two ahead of its premiere on September 30. The trailer briefly flashes back to Sherlock returning to 221B Baker Street, where he finds a new look but retains his no-nonsense personality. The film clips show him at a piano bar with Martha and Mary when Molly puts a hand on his shoulder. “You can’t take on the world alone,” she says. Other new scenes include John Watson smoking a cigarette, and Molly recognising Mycroft Holmes. “I just saw him at the club,” she says. “I never thought I’d say this, but he looks well.” Sherlock star Benedict Cumberbatch has been on a leave of absence for the past nine months, but will return to the series, in which he plays the title role. The show, which was created by Steven Moffat, is based on the books by Sir Arthur Conan Doyle. Sherlock made his debut in Britain in 2010 and also airs in the US, where it has amassed an impressive two-season run on BBC America. to the Federal Government and its close relationship with [South Korea].
