The map editor is only intended to be used in conjunction with any files that have the <?xml-stylesheet href="qxmap.xml" type="text/xsl"?> extension. It does not contain any built in map editing or WYSIWYG functionality, but can be used as a container for other map editors. IMPORTANT NOTE: This application is NOT part of the MGW project. It is intended to be a standalone program, and can be used as such, but it is also included in the main MGW application source tree as a convenience.
